## Knuckle Boom Truck available upon request

## NORTHWEST CASCADE-FLOHAWKS SEPTIC TANKS (BRAWLERS) / ACCESSORIES

### BRAWLER TANK INFORMATION

Brawler Tanks are used primarily in commercial applications (including Nibbler and Nibbler Lite Systems) or in large residential projects. Brawlers are a “walnut-shape” two-part tank with both halves mono-poured. A mastic seal is used between the two halves to provide a watertight joint. In poor soils or high water table mudding the joints is recommended. The tops have 2-inch adapter rings for easy riser attachment. Brawlers come in a variety of sizes from 1600 to 3100 gallons. Modular sidewall extensions allow flexible sizing for different applications; each extension increases capacity by 520 gallons

Brawlers are available with one or two compartments, and can be ordered with 4 or 6 inch sand collars poured in for inlet or outlets. Tanks are engineered for a maximum of 3 feet of cover.

Brawler tanks may be built to H-20 (Traffic rated) specifications. All H-20 tanks must have a minimum of 12 inches of cover and a maximum of 8 Feet.

We recommend that all tanks in high ground water table or poor soils have water diverted around or away from tank locations. Some poor soil conditions may require ground stabilization material to be placed around tanks with extensions.

Custom-built tanks are available on request; allow at least 2 weeks notice.
